Hi Mark,

Regarding Github repository you created (<https://github.com/geckoprojects-org/org.gecko.emf.r>) - shouldn't this be kept consistent with how repositories for other workspace extensions were named? I.e.:

- "Firebase Admin SDK" workspace extension (groupid: 'de.dim.firebase.admin') was placed in 'gitlab.com:datainmotion/dim-firebase-admin' repo
- "Android Publisher" workspace extension (groupid: 'de.dim.androidpublisher') was placed in 'gitlab.com:datainmotion/dim-google-api-services-androidpublisher' repo

.. and now, "Renjin" workspace extension (groupid: 'de.dim.renjin') would be placed in <https://github.com/geckoprojects-org/org.gecko.emf.r> repository ? Shouldn't that repository be named <https://github.com/geckoprojects-org/dim-renjin> or <https://github.com/DataInMotion/dim-renjin> ?

Renjin workspace extension dependencies are now all released to Nexus: <https://devel.data-in-motion.biz/nexus/#browse/browse:dim-release:de%2Fdim%2Frenjin> (de.dim.renjin); I will commit to repository once this naming issue is clarified / repository renamed.

Regards,

Hi Michael,

regarding the R Problem:

I looked at the baeldung link and I think, installing additional server components is not a good option.

So we should use the Renjin stuff, even if we have to OSGify everything. But if there are so much dependencies, I tend to create an own repository for R.

<https://github.com/geckoprojects-org/org.gecko.emf.r>

Because it sounds like it is a little bit more than just an EMF Util ;-)

Just start with this new github repo. We can merge it later into the gecko.emf.util anyways.

@Jürgen: Do have any different thoughts?

Regards,

Mark
