**To:** Jürgen Albert <j.albert@data-in-motion.biz>, Mark Hoffmann <m.hoffmann@data-in-motion.biz>

Hi Juergen,

I informed you weeks ago about options available for R. You have confirmed then to proceed with Renjin.

I explained in detail in summary attached regarding implementing Java-R integration from scratch - perhaps you have overlooked these points from summary I provided.

You did not know and apparently still do not know what issues arose, in addition to why Java-R integration from scratch is not something I would be able to do in a shorter time period; please refer to summary for more details. Please familiarize yourself with information I provide prior to answering as it contains all that I have to convey in that context.

Do we still have the meeting today at 4 PM or do you need more time to review summary I provided, as well as examples from PR, and address those other questions I asked in summary?

Regards,

Hi Michal,

that is all fine and good and we definitely need to look into the issues you have with the tooling.

I however wrote to you on the 17th:

| We will look into it and will discuss what the Customer wants further. So in the meantime: Please stop with the Renjin and take care of the stuff I comment on in your PR.

While I appreciate that you proactively looked into the JS thing, we still can't use the implementation as it turned out that Renjin is under GPL and thus not usable for the Customer or for us. I was under the assumption that you had stopped on the R topic as I asked you too and that we can discuss this later to decide what we can do.

So every hour you spend after I asked you to stop is an hour I can't bill to the Customer.

Jürgen.
