To: "Timothy Ward" <tim.ward@kentyou.com>
CC: Levent Gürgen <levent@kentyou.com>

Hi Tim,

Thank you for this clarification.

Regarding demonstration: in order to properly test everything, in addition to integration tests, I would prepare a demo project anyway where this is utilized, to verify that everything works. Do you have any specific idea for such demo project - perhaps this (i.e. demo project) can be combined / re-used, for the purpose of properly testing this implementation ?

Regarding weekly sync: yes, I would report progress to you anyway, in written form, at least once per week, and we can have a call as well, as you prefer.

Aside from this demo project question, I do not have any other questions at this point, and even this is not a blocker, so looks like we're ready to start.

Levent: please let me know if I should prepare contract then. Provided we finalize with these formalities by tomorrow, I could start tomorrow (Tuesday, September 10th) or the day after (11.09).

Regards,

> Just to confirm, we are looking for an implementation of chapter 160 - the Feature Launcher Service. This could rely on the existing implementation of chapter 159 from Felix (https://github.com/apache/felix-dev/tree/master/features, https://mvnrepository.com/artifact/org.apache.felix/org.apache.felix.feature) or another suitable implementation. The implementation of chapter 160 will be made open source, so all dependencies must be compatible with Eclipse Licensing.
>
> Levent will be dealing with the commercial points, but the timeline requires that we have something that can be demonstrated at the OSGi Summit/OCX in mid October, so ideally we'd have something "working" (not necessarily bug free) by the 7th of October so that we have time to assemble a demonstration with it. If we are able to go ahead then I'm expecting that we'll have regular (weekly?) chats to update progress, as well as me being available to answer any questions that come up.

>> Hi!
>> Thank you very much for reaching out. I understand it was August / holiday time, hence the silence after our call several weeks ago. I'm glad I can be of help!
>>
>> Few questions to start with:
>>
>> a) Is it "*159. Feature Specification*" (page 71 of https://www.eclipse.org/lists/osgi-dev/pdf4su7WjaR.pdf) or "*160. Feature Launcher Service Specification*" (page 93 of https://www.eclipse.org/lists/osgi-dev/pdf4su7WjaR.pdf) or both ? You mention "OSGi Feature Specification", then refer to "OSGi Feature Launcher Service Specification", so it is not clear;
>> b) If this was a long term contract, billing would be monthly, per daily rate, since we do not have a long term contract yet, billing would be weekly, per hourly rate, which is higher than in long term contract - either way, it is time & material; also, that implies a B2B form of contract - is that something you are comfortable with and should I prepare such short term time & material contract then ?
>> c) You mentioned you want to start ASAP, but how soon you need this done ? I need to know as I have other things going on and could devote 20-32 hours per week, depending on how soon this needs to be done;
>>
>> I could start early next week, provided we can get formalities taken care of until then.
>>
>> Kind regards,

We don't normally use a live coding session for candidates with a GitHub portfolio demonstrating that they can code, so it will be a more general/theoretical interview. There's no need to prepare a development environment.

I am fresh off working for 3 years on a very similar position (https://kentyou.com/2021/08/20/java-developer/), as you may know, but there are a multitude of technologies this touches upon. So, if possible, please let me know if any up-front environment set up is required / areas you're most interested in.
